ALSO A GOOD TWO REEL COMEDY

CLARESHOLM LOCAL NEWS

Meet me at the Tea Kettle Inn.

Come to the Clareholm Fair on July 20 and 21.

Oscar Hage of Macleod was a week end visitor in town.

Clareholm Fair dates are July 20 and 21. Be sure to take it in.

Many from this district have been in Calgary this week attending the fair and stampede.

Harry Carey in "The Prairie Pirate" at the Rex Theater Friday and Saturday nights this week.

Mr. and Mrs. D. A. Anderson and little son left on Thursday for a week's outing at Waterton Lakes.

Mr. and Mrs. A. H. Swain and daughters Helen and Letta, of Lacombe, were guests of Mr. and Mrs. Tim Chilton last week.

Mr. and Mrs. Tim Chilton are leaving Sunday for a trip through Glacier Park and from there will go to Great Falls to visit friends.

Chautauqua organizer was in town on Thursday and met a good turnout of the guarantors at the L.O.O.F. Hall in the evening.

There will be horse races, baseball game and football game at the Clareholm Fair on July 21. There will also be a big dance at night.

The Canadian Pacific crop report for July 5 forecasts a good average crop for southern Alberta if present prospects are maintained.

Mr. and Mrs. H. T. Armentrout and family and G. A. Armentrout of Spokane have been visiting at the home of Mr. and Mrs. Tim Chilton the past week.

There are splendid entertainment features on the Chautauqua program this year. Keep the dates in mind, July 24 to 30, and get your season ticket early.

The Misses Agnes and Jean Laidlaw and Miss Cueva Post left last Friday night for Portland, Oregon, where they will spend a month's holidays.

There was a splendid rain on the night of July 1 in this district and another good rain this week. The weather has been unusually hot and all crops are making very rapid growth.

A good list of prizes is offered at the Clareholm Fair on July 20 and 21. If you have something in the lines embraced in the list bring it along and help make a good fair.

There was a good attendance at the afternoon performance of Heritage Brothers circus, but the evening attendance was light chargeable no doubt to threatening storm clouds. The performance was a creditable one.

University of Saskatchewan Is Carrying On Valuable Work In Extending Scientific Knowledge

President Walter Murray, at the recent convocation of the University of Saskatchewan announced that the province had decided to use its share of the surplus of the federal government by the Federal Government during the war, to establish an agricultural research foundation. The income from the fund will be some \$150,000 a year, which will be administered by a board of trustees for special researches in plant and animal diseases. In marketing, and also for scholarships, says the Manitoba Press.

This action of the Saskatchewan Legislature is in line with its record as regards research at the University. For several years now an annual grant of \$15,000 has been voted for this end. Acting under this grant, investigations have been carried on in animal diseases and in plant breeding in the construction, in rearing out of crops of corn suitable for Southwest Saskatchewan and in chemical and physical researches. Among these latter, a report inquired into the cause of decay in concrete. The work along this line has shown such promise that the Dominion Cement Company and the Dominion Research Council have each repeated its grant.

So well has the ceramics department developed that it was announced that a department of geology would be established. Professor Murray, of the University of Manitoba, has accepted the appointment to this department.

Four reports on soil surveys have been issued and two more are in preparation. Evidently these reports have not been allowed to waste their information on the desert air. The university, like for the farmer, the university, and the loan companies have petitioned the university authorities that these surveys be accelerated. The fact is as significant, as the interest of the Provincial Government in university research in agriculture, and the interest of the province and the university.

On the university side it will be noted that each of these efforts have been in direct relationship to Saskatchewan and not concerned with the ravages of the insect in Africa. True, science should not and cannot know community boundaries, but it may be as true science and yet begin at home.

The criticism might be levelled that all of this is applied science, but it is playing the game. The university should also devote a portion of its time, talent and income to increase the world stock of knowledge of pure science. Dr. Murray claims that this phase is not neglected and that moreover the feeling for research has outgrown the intellectualism of the department of the university, students and faculty alike. From this quickening, can come the ultimate flow of human achievement, creative work.

Trees On The Prairies

Nearly Three and a Half Million Young Trees Shipped This Year

From Sudbury plant of the Dominion forestry farm at Sudbury, Sask., have been shipped buty trees destined to become pleasant groves of shelter for nearly 3,000 places in the Canadian prairie provinces—Manitoba, Saskatchewan and Alberta.

The demand for this free service, afforded by the Canadian Government Department of agriculture fluctuates with the years, according to the farming conditions and settlers' movements. Up to the fall of 1923 the Sudbury station had shipped trees in free service over 17,000,000 trees. For 1924 the total was over 2,600,000, while in 1925 it was about the same number. This year 2,555,000 were shipped.

It Was a Pretty Strike

It was such a pretty strike—very busy and filled with cooking sauces for the volunteers, and dukes and marquis running locomotives, and strikers cheering the soldiers and playing football with the booties. It did really look as though the Empire had a sense of humor that in these United States sometimes lack—Chicago Tribune.

May Enlarge B.C. Plant

"If the chemical research work of our laboratories regarding utilization of lumber could be made the size of one bushel," said Mr. Lawrence Kilham, president of the British Columbia Pulp and Paper Company, "it would be the first foreign trade bureau of the Board of Trade of Vancouver."

Taste, lands and makes can live longer without food than any other creature.

W. N. U. 4-27

Canada's Wheat Surplus

Dominion Has Supplanted U.S. as Granary of World

Figures supplied by the latest bulletin of the International Institute of Agriculture at Rome gives the world total of exportable wheat between last August 1 and next July 31 as 735,000,000 bushels. The needs of the importing countries will be satisfied with 625,000,000 bushels. The carry-over, therefore, will be the satisfactory total of 110,000,000 bushels. So far as can be judged in advance of the export of what the next yield will be. It is apparent that the price levels are at their minimum for some time.

No longer in the United States the granary of the world: its wheat crops in the last several years have not been particularly large and the domestic demands already have subtracted from the exportable surplus. The Institute of Agriculture estimates the exports of American wheat at 61,500,000 bushels for the crop year ending next July 31.

That figure leaves the Republic a poor fourth in the list of five leading wheat-exporting countries. Canada leads with 100,000,000 bushels, Argentina is third with 84,500,000 bushels, Australia is third with 77,000,000 bushels, and India is fourth with 6,000,000 bushels. A total of 842,000,000 bushels is expected to come from all other wheat-growing countries.

Minerals Are Essential

Milk Cows Often Need Building Up

At Winter

For the heavy producing cows that have come through the winter in a weak or less depleted condition with respect to calcium and phosphorus and where these cows are now going out to pasture, it would seem a wise practice to provide them a mineral supplement, says the Breeder's Gazette. They will need salt anyway. They will not eat enough bone meal and finely ground limestone alone, and they need something of a palatable feed nature or with salt. The mixture of equal parts of bone meal, finely ground limestone, and salt, fed daily, should supply the mineral deficiencies of the cows in those sections where there are losses due to goitre. In these sections some potassium iodide should be given. Two grains of potassium iodide per head daily may be mixed with the feed. This is best done by sprinkling on the feed some tablespoonful of a solution of potassium iodide to one gallon of water. This is true at least until further knowledge is discovered on the mineral nutrition of cows.

It Almost Too Perfect

Vermont Boy Does Housework As Well As Chores

Donald Brown, 10-year-old son of Mr. and Mrs. Clifton Brown, is an expert in cake and cookie making. He makes all the cakes and cookies for his mother, attends to the baking and does the ironing. He also takes care of his room and does other work about the house, besides doing outdoor chores.

New exhibition buildings are being erected at the fair grounds. These will be ready for the World's Poetry Congress in 1927. Plans for the buildings are being prepared for distribution to intending exhibitors. Application for these should be made to Ernest Rhoades, Congress Secretary, Experimental Farm, Ottawa.

Report Uniquely Discovery

English Workmen Find Complete Sickle In Heart Of Tree

Many curious objects have been found embedded in trees, but the recent discovery of a sickle is probably unique. This object was found by working men employed in the forests of Weymouth, England. While engaged in sawing an elm into planks, a complete sickle was found in the heart of the tree. The elm was grown in Bedfordshire and is estimated to be about 50 years old. It is supposed that a woodman left the sickle in the tree some 70 years ago, as that number of annual rings were found outside the sickle.

Had Some Old Timer—Understand him took mechanical engineering. What is he doing now?

Second Old Timer—He is working for the railroad.

"What so?" "What doing?"

"Well, you know the man who goes around the cars and taps all the wheels to make sure everything is all right?"

"Yes."

"Well, Bill helps that man listen," Iowa Green Guardian.

A man seldom likes to meet an other who has a bad for collecting bills.

Some Interesting Facts

Remarkable Progress Made By Canada In Recent Years

In a recent compilation made by R. H. Coats, Canadian Government statistician, the population of Canada in 1923 was 8,264,200. In 1911 it was but 5,271,000. Thus, the gain in 12 years has been 75 per cent.

Some interesting facts given in the compilation are: "The number of Canadian homes is 2,001,512, of which 62 per cent. are owned and 38 per cent. rented; the average Canadian family is 4.62; the proportion of men to women is exceedingly high—103 to 100; one may remark the low amount of crime (2.77 indictable offences per 1,000 population in 1924). On education Canada spends more than \$120,000,000 yearly.

"Next to population among national assets stands natural resources. The basic fact about Canada is that she is a half a continent and still a 'new country'. In agriculture, the total arable area is at least 300,000,000 acres, while less than one-half is occupied and less than one quarter 'improved'."

"That the population Canada ranks only twenty-fifth among the countries of the world, in import and export trade ranks sixth. In exports, on per capita basis, the stands second. Nearly half of the trade of Canada is with the United States."

Arranging Culling Service

Members of Saskatchewan Poultry Pool Weed Out Flocks

The Saskatchewan Egg and Poultry Pool is arranging a culling service which will enable its membership to have their flocks weeded out. The pool is also arranging to market the non-profit hens, culled from the flocks, by making live car shipments from country points. It requires some 2,000 hens to make up a carload. It is intended to make a substantial financial cash payment at the car door, when these calls are delivered for shipping. Where a sufficient number in a district desire this service, the culling experts will be available this summer. The cost per flock will be nominal.

Young Leghorn Won Egg-Laying Contest

Pullet Outdistanced All Older Contestants in Production

The younger of the hen species is more prolific than her older sister, according to records of an egg-laying contest at the car door, when these calls are delivered for shipping. Where a sufficient number in a district desire this service, the culling experts will be available this summer. The cost per flock will be nominal.

A young White Leghorn pullet won the Argentine contest. During eight months she laid 162 eggs. The best record achieved by hens was by a White Wyandotte, which laid 131 eggs during the eight months. A team of White Leghorn pullets also laid a total of 510 eggs to the best total of 414 by six White Wyandottes among the hens.

Forest Planted By Scouts

No less than 85,000 trees were planted by the Boy Scout troops of New York state last year. About half that number were planted by the Scouts in Pennsylvania. Where the minimum age limit of sixteen years did not in force, the Scouts had controlled the forest and helped fight fires.

Because of the ban on hunting swans in the past ten years, there are more than 15,000 swans in waters along the coast of Maryland, Virginia and North Carolina.

Some Interesting Information Relating To Early Exploration Of The Hudson Bay Area

All Farm Animals Need Salt Supply

Plays Important Part As Appetizer and Stimulus to Digestion

Experience and science alike have shown that salt is essential to good health and thrice of farm livestock. It is not a food nor does it directly increase the digestibility of food, but it does play an important part in the work of nutrition, writes F. T. Shutt, Dominion chemist. It is chiefly valuable as an appetizer and substance which makes the feed more palatable; as a stimulant and tonic, when taken in small amounts, and as a source of hydrochloric acid, a normal constituent of the gastric juice. Its use, therefore, leads to larger consumption of food, and by stimulating digestion, permits the animals to make a larger and more profitable return from the same amount of food.

Of all farm animals, cows will require the largest amount of salt.

Sheep require salt and there should be no neglect in supplying it, either by trough, barrel salt, or rock salt. It should be available to them at all times.

Horses thrive best when regularly supplied with salt, say, about one ounce daily. When hard at work they require more salt at rest, for the reason that salt is excreted in the perspiration.

Pigs and poultry require less salt than other farm animals, but it should be supplied regularly. Brood sows should not be without salt, which may be given in salt, trough or self-feeder.

All stock fed liberally with rich, nutritious feed, exhibit a craving for salt. It is not clear, however, if good health and thrift are to be maintained.

The Weed Menace

Vigorous Prosecution of the Fight Against Weeds in Alberta

More than eighty municipalities were represented at the convention of weed supervisors and inspectors, held at Olds, Alberta, recently. Through discussion of the weed campaign for the summer took place, and indications are for a vigorous prosecution of the fight against the weed menace.

Co-operation between the various municipalities and the provincial department of agriculture in the campaign was manifest at the convention and considerable further progress is anticipated this year in clearing the province of the weed menace.

Needed As Much As Cash

The Bradford Reporter notes that young Cornelius Vandervelt has lost a million and a half dollars trying to establish the King of the Run newspaper more than money alone is required—brains, for example.—Kingston Standard.

Prize trees should not be sprayed when they are in full bloom, because it injures the buds. The best time when they play so big in pollenating the flowers.

The Victoria Tower, Westminster, London, is the biggest and highest square tower in the world, being 75 feet square and 226 feet high.

The Belfast Telegraph contains some interesting information relating to early explorers in the Hudson Bay area. According to this paper, Dobbs, relating to the shores of Hudson Bay, was the most striking acquisition of the Ulster Record Office. These were found among papers of the Duke of Devonshire at Clarendon, the best known of whom was Arthur Dobbs, a sixteenth century author and statesman, who towards the close of the 18th century was Governor of North Carolina. He was dissatisfied with the Hudson Bay Company, which had confined its explorations to the coast, and seeking a northwest passage to the Pacific. Apparently he obtained copies of reports on Hudson Bay explorations up to that time and these have been preserved for 170 years on the shelves of Belfast City.

The Journal of Henry Kelsey, covering the experiences of an officer of the Hudson Bay Company from 1812 to 1822, is the earliest volume among these documents. The greater part of his life seems to have been spent in the valley between Governor of North Carolina. It is evident from his reports that he must have reached the Hudson Bay area in 1812, and was probably the first white man, certainly the first Englishman, to penetrate so far. Twice, in 1814 and again in 1817, his fort which he was stationed was obliged to surrender to French vessels of war. The Hudson Bay Company, in 1812, and gradually rose to the position of chief trader at a station. Only recent events are given of his later expeditions. It is clear that he was very rich to the Eskimo country, although he was not able to develop trade with them.

It is recorded that Dobbs kept up his campaign against the Hudson Bay Company and induced the British authorities in 1741 to send the King's Furnace to Churchill River. The Furnace's journal of this voyage is also among the papers preserved in the 1746 two other ships were sent out on exploration work, and the journal of one of them is included in the Dobbs papers.—Belfast Leader.

Preservation of Eggs

The "Guarantee" Process For Eggs Stored in a Cellar

The value of the "Guarantee" process for storing eggs, which consists of dipping the eggs in a solution of wax and oil, as demonstrated in an experiment where the eggs were kept in a cellar, describing the experiment in his latest report the Dominion poultry husbandman states that the "Guarantee" process is a considerably better condition at the end of fifteen weeks than were the non-processed ones. When tested for flavor the eggs were found to be in favor of the "Guaranteed" eggs.

The non-processed eggs began to have a musty, stale, or moldy taste, whereas the "Guaranteed" were laid eggs were quite palatable, boiled or poached, when taken out at the fifteen week mark. It seems, therefore, certain that the process has a decidedly favorable effect on the keeping quality of eggs stored in an ordinary cellar.

Enormous Flower Grows in Sumatra

Measures One Yard Across and Weighs Fifteen Pounds

What is the largest flower you have ever seen? Probably No big yellow sunflower, or maybe the poppy. But in tropical countries flowers grow to an enormous size. The children of Sumatra could bring you a flower that measures one yard across, having five large creamy-colored petals as large as dinner plates, and a beautiful center of purple stamens. You would not want to carry a bunch of them home, for you would find one alone in your garden, and it would be a fully developed flower weighing fifteen pounds. Just fancy, a bud of this remarkable flower looks like a brown cabbage.

Was Not Interested

The writer was taking in order of a pretty girl who was accompanied by a blond, polky, middle-aged man.

"Oh, he can order whatever he likes," came the startling reply.

Marque wheat, now grown on 25,000 acres of land, all comes from a single head produced in 1903 by hybridization.

It is probable, also, that one set feels more important in the scheme of things than another.

C.P.R. President Leaves for England and Continent

English Workmen Find Complete Sickle In Heart Of Tree

Many curious objects have been found embedded in trees, but the recent discovery of a sickle is probably unique. This object was found by working men employed in the forests of Weymouth, England. While engaged in sawing an elm into planks, a complete sickle was found in the heart of the tree. The elm was grown in Bedfordshire and is estimated to be about 50 years old. Hay Fever

This Trouble Is Becoming More Common in Prairie Provinces

June is the time of year when the first attack of hay fever occurs. Hay fever is caused by wind-blown pollen grains, ragweeds and pigweeds are the three wind-blown plants in greatest abundance and hence the principal causes of hay fever. Other pollen grains may cause hay fever, but they are not so common and do not cause hay fever as early in the year as the principal cause of early hay fever, and the ragweeds and pigweeds, the cause of late or autumn hay fever. The first frost of autumn usually gives hay fever patients immediate relief because it destroys the pollen.

According to Prof. V. W. Jackson, Dept. of Botany, Man. Agric. College, the extended area of cultivation and the consequent spread of grass and weeds has made hay fever a more common illness than formerly, and the present movement of city, red, dense towards suburban districts has made a noticeable increase in hay fever. Perhaps 10 per cent of the people are sensitive to pollen grains, such as contained in pollen grains, and thus polluted by them. Nature tries to throw off the pollen by sneezing and mucous excretion, but the cause is continually renewed by the wind-blown pollen, Nature's effort is a continuous annoyance known as hay fever.

Relief may be obtained in three ways: (1) by getting away from the cause; (2) by making the pollen grains harmless; (3) by counteracting the pollen grains with pollen extracts to produce a relative immunity.

To get away from the cause one must be at least two miles from hay or grass, ragweeds or pigweeds, and even small areas of sensitive people, trees such as pines, poplars, oaks and elms, which sometimes cause hay fever. The grasses are worst in June and July, and the ragweeds worst in August. It is impossible to escape on the prairies where these things are so common, but a short journey or a vacation in the Lake of the Woods would give relief. The causes of hay fever seem to be comparatively free from hay fever pollen.

Traveling in high winds also aggravates this trouble. Hay fever patients are not advised to travel in wind-blown pollen, but these may be more irritating than hay fever, and a fine wet mist gives better protection than wind-blown pollen. A severe heat or light aggravates the attack, and the patient should rest in cool rooms and use colored glasses which bright light irritates the eye.

Nasal spray might be used to nullify the irritation and give some immediate relief. Weak antiseptic solutions of boric acid, guaiac, or iron compound or adrenalin solution are frequently used. A teaspoonful of Friar's Balsam in a pint of boiling water and inhale the fumes will give temporary relief.

Armistice Car Without Honor

Attempts to Establish It as Official Monument Are Unsuccessful

The historic private Pullman car in which Marshal Poch and the German plenipotentiaries signed the armistice in the Forest of Compiègne has again been denied a honor after many unsuccessful attempts within the last seven years proposed to establish the car as an official monument of the war. The municipality of Compiègne recently drew up plans for a permanent home in which to maintain the car as a relic of the war, and its estimated cost was 140,000 francs. Unable to pay all of this, the town asked the state for 100,000 francs, only to be refused.

The minister of war retorted that the state could not assume any expense in this connection. Since the reconstruction of the famous car is beyond the modest power of this little town, the municipal council has just decided that the project must be abandoned.

Sleep Ranchers Come To Canada

Several sheep raisers from the United States have recently made extensive purchases of land in the interior of British Columbia. Sleep ranching on a large scale will be conducted in territory previously considered suitable only to the cattle industry.

The Sweetest Words

A group of newspaper writers were discussing what are the three sweetest words in the English language. One of them suggested "Home, Sweet Home." Another suggested, "I Love You." A third contended, "Enclosed Find Check," and with unanimous approval—New York Evening World.

Manitoba Bees Are Busy

Honey Production Shows Wonderful Development in Few Years

Wonderful growth in the production of honey in Manitoba is reported, not only in quantity but in quality as well. Honey production in the last several years has been a profitable industry in Ontario and Quebec, but recent years have seen a splendid development also in the three prairie provinces. In Manitoba, according to the department of agriculture, production has increased during the last five years from 900,000 pounds to 4,107,800 pounds, and further increase is confidently anticipated. In Saskatchewan and Alberta too, according to the Dominion agricultural, they are now keenly alive to the possibilities in this direction, there being a steady increase in the number of beekeepers in these two provinces.

It is hardly an exaggeration to say that one honey resource are practically inexhaustible. From coast to coast there is an abundance of nectar secreting flowers and plants whose ambrosial crop is wasted because there are not enough bees to harvest it. In order to further stimulate bee culture and beekeeping, the Dominion experimental farms system has established some twenty or more experimental apiaries throughout the country.

Finds Garden Sufficient

Real Gardener Says There and Bothers No One

Gardeners are like poets, in that they are impractical fellows who value their souls above their stomachs, but that need trouble no one, because a man who owns a garden usually stays in it and bothers nobody else. The home is hatched and breaded by repetition, yet in a time when ideals are wandering bewildered through a maze of billboards, gasoline stations, dance halls and hot dog carts there is still some occasion to ring it in. It is not back among the sweet pea vines and the geraniums—Thank God for a garden.—Providence Journal.

In a western city there is a sign reading as follows:

"Of 40¢ who died from effects of gas, 29 inhaled it, 31 put a lighted match to it. Also stepped on it."

Judge—Why did you kick this man?

Accused—Because he called me a mate!

W. N. P. 167

Americans In Western Canada

Recent Census Expected to Show Increase in Number of American Living Here

When the census of the three Canadian prairie provinces—Manitoba, Saskatchewan and Alberta—which is now being taken is completed, it will show that there are over 250,000 American-born residents here.

According to the Dominion census taken in 1921, the three prairie provinces had a population of 1,354,025, of whom 292,140 gave the United States as their birthplace. Since then official records show that over 42,000 Americans have taken up residence between Winnipeg and the Rocky Mountains.

To take the census of Manitoba, Saskatchewan and Alberta required the services of 2,200 enumerators. They covered an area of 538,317 square miles, which is equal to twice the combined area of ten of the largest states in the United States.

Though the census of the whole of Canada is only taken every ten years, a special act of the Canadian Parliament requires a census of 100,000 people to be taken every five years. This census, in addition to enumerating the population in detail, will embrace the fastest possible particular concerning agriculture, the basic industry of the three provinces and also of all Canada.

This year's census will make an appraisal of the 100,000,000 acres of farmland awaiting settlement in the three prairie provinces which are now valued on an average at \$15 to \$25 an acre.

Willing to Oblige

Scottishman Would Grant Favor But There Were Conditions

Morris Harvey, one of the English principals in "The Merry World," says that the Scotchman in this country are much more obliging than they are in England. Harvey has just taken a home in Jersey for the summer. Last Sunday he asked his neighbor, a Scotchman, for the use of his lawnmower for the afternoon. But he was not to take it off my lawn.—New York Evening World.

But few men are brave enough to allow a mild reader to expose their thoughts in the presence of friends.

Claims Wrangle Island

Nome Trading Co. States They Purchased Rights From Stefansson

Carl Lomen, of Nome, Alaska, announced that the Lomen Reindeer and Trading Company of Nome, including himself and his brother, had filed claim to Wrangle Island with the state department in Washington, D.C.

Any immediate action to substantiate the claim, which he would like to press because Arctic aerial expeditions this summer have demonstrated the value of the island as an aviation station, is impossible, stated Lomen. This is because Russia and the United States are without diplomatic relations.

Rights to the island, Lomen announced, were purchased by his company in May, 1924, from Vilhjalms Stefansson, Canadian explorer. Stefansson organized an expedition of four men, led by Alan Crawford, of Toronto, to visit to the island in 1921. The island is 75 miles long and is wide, lying 110 miles north of Alaska and 200 west of Bering Sea.

Reason For Old Custom

Primitive Man Originated Habit That Has Become Handshake

We have always been told that there is a reason for every rule in the books of etiquette.

Do you know why we shake hands? In early days man lived alone so far from his human back in the cave. He fought the wild animals alone and charged home his lost alone. Men warred on one another for the most part. When primitive man was too weary to fight, he would dry his club upon another man's hand in his path and hold out his empty hand to show that he was unarmed. And the extended hand wagged into the handshake.

Today's form says that a person coming into a group does not offer to shake hands. It is up to the members of the group to make him welcome by offering the hand. If they care to.

Bought Napoleon's Cocked Hat

One of Napoleon's famous cocked hats has been sold at auction for \$2,000.

The purchaser is the Prince of Monaco. The hat was brought back from a campaign by the emperor's chief veterinary surgeon, Giraud, as a souvenir.

Perfect Drivers Are The Greatest Menace

So Absolutely and Recklessly Right That Long Drivers Fear Them

The nervous, automobile driver must save the traffic situation in other today says a traffic expert. The perfect driver and the perfect driver are causing all the difficulties and are responsible for accidents and traffic tie-ups.

It is not difficult to understand how the inferior driver causes accidents to his own and other machines, but the perfect driver appears too perfect to be blamed.

The "perfect" driver never gets into an accident himself. He never violates a traffic rule. He never gives needless traffic cops a chance to enjoy themselves at his expense.

The "perfect" driver careens down the street just to not and exceeding the maximum traffic speed limit. Pedestrians see him a block away, and they have the right of way when they hesitate to cross the street as the "perfect" driver speeds toward the crossing.

However, he makes a "perfect" stop just to not and beyond the danger line, breaking no traffic laws, but frightens motorists so that they fear to cross the street while they have a chance.

The "perfect" driver turns around corners with amazing accuracy and disagreeableness. He winds in and out of traffic with a skill that drives other motorists frantic. He is at all ways immediately behind some auto mobile honing for them to speed up or get out of the way and causing them the most impetuous moment.

The "perfect" driver is always right. He is so absolutely and positively right that other drivers and pedestrians fear him. His is the most disrupting element in the traffic situation.

The Origin of the Potato

A Native of Tropical and Sub-Tropical America

The potato is a native of elevated districts of tropical and sub-tropical America. It has been found growing wild in the Andes of South America, Mexico and the Rocky Mountain region of North America. The potato was cultivated and used as food long anterior to the discovery of America by Europeans. It seems to have been brought to Europe by the Spaniards in the 16th century, and spread from Spain into the Netherlands, Burgundy and Italy, but only to be cultivated in a few cases as a curiosity, and not for general use as a food.

It appears to have been taken to Ireland from Virginia by Hawkins in 1565; and to England by Sir Francis Drake in 1585, without attracting much notice. It was a third time imported from America by Sir Walter Raleigh.

Compares Men To Chairs

All Can Be Sat On Says Woman Writer

"Men are like chairs," writes a woman in a foreign exchange, "they vary in shape and size but all can be sat on. Some men are like mahogany chairs, they have their polish after a little while. Some are like chipboard chairs, they need delicate handling; some are like plush upholstered chairs, one cannot stand them on a hot day. Others are like parliamentary seats, they have to be worn. Some married men are like deck chairs, they are at ways being dragged about. Some are like rocking chairs, they put you to rest. And finally, some men are like benches, it takes more than one woman to sit on them."

A Good Old Flag

Dominion's Recent Suggestion to Drop Union Jack As National Emblem

It is wonderful that there is no sentiment in South Africa as there is in Canada at the suggestion that the Union Jack might be dropped as the national emblem. It's a good old flag is the Union Jack, and there's something said to devotion and reverence in the thought of its flying, loved and unchallenged, in South Africa, Canada, India, in the heart of the empire. It is in the constant possession of that, exalts the globe—Stratford Beacon Herald.

Related to Both

An Irishman was seated in a train behind a pompous Italian, who had his dog with him.

"Folke dog ya have," said the Irishman. "What kind is it?"

"A cross between an Irishman and an ape," said the man.

"Shure an' it's related to both ur us—I'm Irish," said the Irishman.

"If a man marries a widow by the name of Elizabeth, with two small children, what does he get?"

"Give it up."

"A secondhand little with two runabouts."

United States Has National Problem

Grave Danger of Food Famine Is Imminent

The American farmers' combined capital has shrunk \$2,000,000,000 in five years, Frank O. Lowden, former governor of Illinois and a nationally possible, told the National Farm School conference at New York, September 10. He said that a national problem, he declared.

"In 50 years, a point of starvation, as regards population, will have been reached in the United States," Lowden predicted. "There is grave danger of repeated food famines unless steps are taken to improve the quality of agriculture by making it more scientific and productive."

He cited figures tending to show that this condition would obtain not only in the United States, but in every other country.

He said he did not hope to receive any cultural aid from other countries when the situation reverses itself," he said, "and will become a nation consuming more than we could produce."

Quoting from a department of agriculture publication, Lowden referred to 1924 as a better year for the farmer than any of the preceding four years. "Yet after a wage allowance of less than \$1.00 a week, the farmer has a 2.6 per cent, without deduction for depreciation of machinery or depletion of the soil."

Combined farmers' capital declined from \$27,000,000,000 in 1919 to \$25,000,000,000 in 1925, he said.

Performing Animals Depend On Music

Plays Important Part In Success of Their Act

Music plays a very important part in the success of the circus companies by animals. This is illustrated by the story of a performing goat. Spreading a carpet on the ground, the keeper placed four blocks of wood about six inches high at a small distance apart, and on these the goat stepped. Several sets of such footings were placed, and on these the goat stepped. Taking a small round instrument, the man began to play an air, which was evidently liked by the goat, for he leaped to the bars and seemed to listen with great attention.

Without ceasing to play, the man took the goat by the collar, set it on its feet, and slipped under it another block. This was repeated until the goat was gradually lifted and the pillars of wood were four feet from the ground, the patient animal all this time keeping its balance properly.

That the music was an important part of the performance is shown by the fact that when the keeper ceased playing the goat wavered and trembled, and directly after the music was in his footing became steady again. When it finally stopped, the goat tottered, lost its balance, and jumped to the ground.

Mandarin Must Be Buried In China

Wealthy Merchant Died Four Years Ago in Vancouver and Body Still Unburied

For nearly four years the body of Lo Goo Wing, formerly one of Vancouver Chinatown's wealthy merchants, has lain at the unfashionable parlors of Nunn & Thomson awaiting burial. With the present state of political unrest in China it seems that Lo Goo Wing's body may have to wait many more years before burial is possible. Relatives fear that if the remains were forwarded to China they might be stolen by brigands enroute from the coast to the final resting place planned for them in the interior. But under no conditions will the body of the old Chinaman be buried in Canada.

Lo Goo Wing was not of the ordinary merchant class. He was a mandarin, and according to the customs of China's aristocracy, a mandarin must not be buried in a foreign land. This would be desecration, it is said, and would forever separate the spirit of the deceased from those of his empire.

Give Away Queen Mother's Possessions

Most of Non-Confucian of Queen Alexandra's private rooms at Marlborough House have been distributed in charitable institutions in accordance with the late Queen's will. Her most cherished household goods, both at Sandringham and Marlborough House, have been sent to relatives and friends.

And Her Father, Bill

Her father—Laura is too young, I tell you. But too young to even think of marriage? Do I understand that she has given her to an engagement ring?

Perdita—"Oh, no, sir. It's just a teaching ring."

They're Off! The Crack Footballers

Here's the football team that represent the city of Montreal, Quebec, and some of the others are below the first rank.

They are going right across Canada over C.P.R. lines, from Montreal to Vancouver, and return, playing the best Canada has to put up against them. They started at Montreal with a game on Victoria Day, and they return to Montreal for the final game July 24. In between they play at Toronto, Port William, Winnipeg, Regina, Leithbridge, Calgary, Vancouver, Nanaimo, Victoria, Edmonton, Saskatoon, Winnipeg, Timmins and Toronto. The last games will be against picked all-star teams representing Ontario and Eastern Canada.

Very few games have been the rule so far in these games. Five thousand saw the first game in Montreal, which the visitors won 5-3 and similar crowds saw the games in Hamilton and Toronto. Favored with cold and therefore favorable weather at the outset of the four the players were able to become acclimated before they struck the heat of a Canadian summer in the west. The result was a tour that not only gave Canadian a first-hand knowledge of a great game, played by experts, but also gave the traveling team a good time in a British Columbia new to the majority of them, and encouraged the hope that these tours will be made a yearly affair in the future.

W. N. P. 167

WORLD HAPPENINGS BRIEFLY TOLD

The bill approving the new trade agreement between Canada and the West Indies was given third reading in the house at Ottawa.

The National Assembly at Ankara, the Turkish capital, has ratified the treaty between Great Britain and Turkey settling the dispute about Mosul.

Julius Miller, of Michigan City, Indiana, had his right eye when a passing automobile flicked from the road a nail which penetrated Miller's eyeball.

A. C. Ferguson, K.C., of Winnipeg, was unanimously elected president of the Manitoba Bar Association, at the annual meeting in Winnipeg.

The Rumanian Government has ordered five submarines from Italy. Italy is also completing the reconstruction and refitting two Italian built torpedo boats for Rumania.

The first commercial shipment of seed potatoes from British Columbia to California went forward recently, consisting of 60 tons of Durban certified seed.

It has been officially announced by the grain division of the Vancouver Merchants' Exchange that no further quotations on cash grain would be issued until September 1st.

Three years absent from his native coast a homing pigeon recently returned to England. It was lost in Mexico, France, July, last. This is considered a remarkable feat of bird memory.

Senator Dandridge, government leader, replying to a question in the senate, said the government intended to appoint a minister plenipotentiary to Washington. As to whether the appointment would forward this session was under consideration.

There were more than 10,000 casualties, 125 of which were fatal, in Prussian lands in 1925, according to information given out by the Prussian military of trade. Eighty-five per cent. of the casualties occurred in the Ruhr district.

Premier Brind of France has asked the League of Nations to make counterfeiting an international crime. Brind's action was taken as a result of the recent Hungarian counterfeiting plot, which was reported to be flooded by bogus franc notes.

Liquor laden vessels would not be allowed to go into Canadian ports for repairs or for other reasons. The Customs Act is amended to include a recommendation made before the custom probe by W. P. Wilson, chief of the customs preventive service for Canada.

A Birthday Gift

Canada Returns to the Two Cent Postage Rate

On and after July 1st will cost only two cents to send a letter from one part of Canada to another or to the United States and Mexico. At present the letter rate in Canada and in points in the United States and Mexico is three cents per ounce, one cent of which is war tax that was imposed on April 1, 1925. The removal of the one cent war tax and the return to the more popular two cent rate, which has been in effect in the United States, was provided for in the Canadian budget recently submitted to the Canadian Parliament by Hon. James A. B. B. Minister of finance and now approved.

It is expected that the return of the two cent postage will cause a big increase in postal business in Canada, not only in the urban centers, but in the farming districts served by 3,772 rural mail routes with about 210,000 boxes on them.

The Canadian public regarded this reduction in the letter postage rate as a birthday gift from the government, as next July 1st will be the 50th anniversary of Confederation, when Canada became a self-governing and united Dominion.

British To Control Marconi Company

Only Small Percentage of Issued Shares Held By Foreigners

At an extraordinary meeting the Marconi Telegraph Company agreed to an alteration of its articles of association whereby the majority will remain under British control and not more than 25 per cent. of the issued share capital will be held by foreign investors. Only natural born Britons will be eligible as directors or officers in the United Kingdom or the British dominions.

The trouble with a great many young men who want to get into the navy is that they imagine none of it is worth seeing by daylight.

The woman who runs after a husband until she gets one seldom knows of her fate.

W. N. U. 123

Symbol Of Armed Force German Military Uniforms Seen At Peace Conference

German military uniforms were the only military uniforms visible at the conference table at Geneva, where experts under the auspices of the League of Nations began their official discussions on May 18 at Geneva, Switzerland.

The one great nation theoretically almost disarmed, Germany was the one nation to appear with the symbol of armed force. That it is not an accident is evident from the reason why the voluntary disarmament of nations in Europe is extremely difficult.

It is not an accident that makes a nation dangerous, but an armed might. The fact that Germany has been forced to destroy most of her weapons of war and to disband her great military machine does not make her neighborly. If she thinks in terms of arms and armies. Of all the problems before those experts at Geneva, the chief of that of finding a way to secure mutual disarmament.

To Preserve Niagara's Beauty

Scenic Beauty Of Niagara Falls Is To Be Safeguarded

Constitution is under way of a joint committee representing Canada and the United States to discuss:

(1) Preservation of the scenic beauty of Niagara Falls.

(2) The quantity of water which may be further diverted to the Niagara River without interfering with the beauty of the falls.

Canadian representatives on the committee are: Col. O. M. Biegar, Ottawa; J. G. Johnston, chief of the water powers branch, department of the interior, Ottawa; Dr. C. P. Campbell, deputy minister of mines, Ottawa. Names of the United States representatives on the committee have not yet been received.

Not Coming to Canada This Year

Prince of Wales Not Visiting Ranks Says Calgary's Mayor

The Prince of Wales will not visit Calgary and his ranch for some time, and probably not this year, according to Mayor G. H. Webster, who had an audience with the Prince at St. James' Palace when he was in England recently.

According to the mayor, the Prince was greatly interested in conditions here and asked a number of questions about Canada.

"Ideal Fashions" 2nd Floor

Attractively Simple

An interesting return to the modes for the younger generation, is that of the old-time and delightful chablis. A practical frock for the little miss from 2 to 12 is the best of all, simple, fast, and comfortable.

The dress is so simple it can be made in a few hours. The sleeves have a ruffle, and the neck has a gathered band with a round collar as illustrated, or a narrow band. The material is a good quality of cloth, or a light weight of cotton.

There are those in the profession who are of an introspective and pessimistic turn of mind who will start by saying it is no good, will ultimately prove themselves to be quite right.

There are those who take a delight in proving everyone else but themselves to be quite wrong.

These are those in the profession who are of an introspective and pessimistic turn of mind who will start by saying it is no good, will ultimately prove themselves to be quite right.

Claims Discovery Of Long Sought Secret

Chemist Announces Creation of Life By Artificial Means

The claim of John P. Maurer, chemist, that he had succeeded in creating plant and animal life by artificial means has excited widespread interest.

Maurer has cautioned reporters against a sensational exposition of his work, which might prejudice scientists against him. He sincerely believes that he has discovered the long-sought secret of life.

He has been working five years on spontaneous creation of life. He is not disturbed by the refusal of Prof. Francis H. Horick, head of the biology department of Western Reserve University at Cleveland, to take any stock in his discovery.

"If he got life," Horick has said, "it simply came from apparatus already contaminated by life. Invariably this has been the case every time claims of producing life from inanimate matter have been made."

"I don't blame Prof. Horick for saying," says Maurer, "I would have scoffed five years ago. But I can conceive any reasonable man. If reputation will apply the name to my work that they apply to their own, they will admit that I have created living organisms from inanimate matter."

Laboratory tests for Maurer are being arranged by science teachers at the Lorain-high school.

ON THE AIR

What Is Doing in the World of Radio

On advantage in having the sermon over the radio is that the preacher can't spot you if you go to sleep.

A woman moved recently from her old home at Marion, Ohio, saying that the locality and neighbors were fine, but that there was too much taste to do anything over the radio.

Six broadcasting stations located outside of the metropolitan area of New York City have their studios in the city. New programmes are sent out by remote control.

England's famous train which makes a daily run at 226.5 miles at the rate of 110 miles an hour without a stop during the entire trip, is now equipped with radio for the entertainment of passengers.

Although Mr. Edison assures us that the world needs no more inventions, we think there is a market for some device which will tell the recipient of a radio photograph just how the sender really looks.

Arthur Goetzly, of Cambridge, Mass., is totally blind, but he is able to derive entertainment and education from his radio set. He can "read" the dials with his fingertips and has become an expert at the instrument.

He has no difficulty receiving distant stations when he desires to hear them. It is said that on one of the first attempts of broadcasting a church service in Winnipeg, Dr. Leslie Paul was preaching from his own pulpit in Assiniboia Church. He had followed the usual custom of the day, and watched on the desk before him. Shortly after the sermon was started an electrically made his announcement to the preacher with a card containing a message that had come in from a town several miles off: "Tell the preacher to put his watch in his pocket. It sounds like an alarm clock, and we can't hear the sermon."

Here and There

Total trade of Canada during April, 1926, amounted to \$127,068,121, as against \$119,914,029 in the same month last year and \$109,034,633 in April, 1924. Of the total \$78,801,233 was for imports and \$49,166,888 for exports.

Immigration figures for the first three months of the current year show an increase of 103 per cent. over similar period for last year. Total number of immigrants entering country was 21,945 for 1926, as against 10,792 for 1925.

Production of manufactured non-metallic mineral products in Canada in 1925 reached a value of \$115,567,216, an increase of almost 45 million dollars over 1924 and the highest since 1920 for this group of industries. The operating plants in these industries in 1925 represent an invested capital of 126 million dollars.

Remarkable expansion of the cream export industry of the province of Quebec is disclosed by figures of the Dominion Express Company furnished recently. In May three to four carloads, or about 614,400 pounds of cream, were going every week, while in June an average of a carload a day, 153,600 pounds, was predicted.

Tomatoes weighing over 22,600 pounds travelled across Canada by Dominion Express recently, constituting the largest load of hot-house tomatoes ever shipped out of British Columbia. Handled in a single express car, the shipment was the product of the Victoria Hot-House Association, which represents the majority of the tomato growers on Vancouver Island.

E. W. Beatty, Chairman and President of the Canadian Pacific Railway, left recently for England and the continent, for a trip which is to last several weeks. E. Beatty, accompanied by W. R. Macdonald, Vice-President of Traffic, will complete arrangements for the building of the company's two new ocean liners for the Atlantic route while in England.

One minute after midnight of May 31st, 194 m.s. of the Lyndonville subdivision of the Boston and Maine Railway was taken over on lease by the Canadian Pacific Railway. Close to the international border and running through Vermont, the railway line will tap rich consuming and producing sections of Connecticut, Massachusetts, New Hampshire and Vermont.
